Professional Experience

Junior IT Helpdesk and Support Engineer Dec 2025 – Present
JLO Global Resources, Kuala Lumpur, Malaysia *40 Hours/Week*

- Execute comprehensive L1 and L2 technical support for 100% of internal requests, achieving a 99% operational uptime by streamlining issue resolution and ticketing processes.
- Manage workstation provisioning, secure access control, and user security training to accelerate enterprise IT onboarding and ensure compliance with internal security policies.
- Deploy network infrastructure and perform lifecycle hardware troubleshooting to ensure high-availability system reliability across the organization.
- Maintain and administer corporate systems including Active Directory and Microsoft 365, resolving complex Windows and Linux OS issues for end-users.

Cybersecurity GRC Intern Apr 2025 – Oct 2025
AVERIS (RGE Group), Kuala Lumpur, Malaysia *40 Hours/Week*

- Co-authored technical Security Risk Assessments (SRA) for 3 enterprise platforms, ensuring strict compliance with ISO 27001 standards within a 4-month timeframe.
- Evaluated Digital Assets Management (DAM) and Generative AI tools (e.g., Zoom AI Companion) against structured criteria to accurately assess functionality and enterprise risk.
- Collaborated with the Data Loss Prevention (DLP) team to evaluate access controls and successfully mediate critical screen-capture vulnerabilities.
- Supported IT budget planning for an RM 3.3M technology portfolio by generating risk analysis reports and updating project dashboards for executive-level prioritization.

QA & Security Tester Nov 2024 – Aug 2025
Islamic Institute of Burma (IIB Tech Team), Remote, Myanmar *30 Hours/Week*

- Executed vulnerability assessments and security audits using Burp Suite and Postman to identify and remediate critical security risks within the institute's web infrastructure.
- Accelerated deployment lifecycles by 30% relative to project schedules through effective cross-team incident resolution and CVSS-based remediation reporting.
- Conducted rigorous User Acceptance Testing (UAT) and functional testing, successfully identifying and patching over 20 distinct system defects.
- Collaborated directly with the development team to supply detailed technical reports and actionable recommendations for improving website quality and security posture.

Education

Bachelor of Computer Science (Cybersecurity) (Honours) Graduated: Dec 2025
Albukhary International University, Alor Setar, Malaysia
CGPA: 3.67 / 4.00 (First-Class Honours) — **Awards:** Dean's List (6 Semesters)

Academic & Technical Projects

Dynamic Web Application Vulnerability Scanner (Honours Thesis) Oct 2024 – Feb 2025
Albukhary International University, Alor Setar, Malaysia

- **Problem & Motivation:** Investigated the complexity and inefficiency of existing vulnerability tools (e.g., Burp Suite) to provide an accessible cybersecurity solution for developers lacking dedicated security resources.
- **Design & Implementation:** Designed and implemented a Dynamic Application Security Testing (DAST) web

application from scratch using Python, Flask, Requests, BeautifulSoup, HTML, CSS, and JavaScript.

- **Methodology:** Developed automated payload injection and response analysis techniques to evaluate web applications for SQL Injection (SQLi), Cross-Site Scripting (XSS), and server misconfigurations using custom rule-based detection algorithms.
- **Results & Contribution:** Demonstrated the feasibility of a lightweight DAST framework capable of detecting high-severity vulnerabilities while automatically generating structured remediation reports for secure web application development.

Enhancing Driver Monitoring Systems via Edge Computing (Directed Study) Jun 2024
Albukhary International University, Alor Setar, Malaysia

- **Problem & Motivation:** Researched critical latency and network dependency challenges in cloud-based Driver Monitoring Systems (DMS) to improve real-time responsiveness for intelligent transportation systems.
- **Design & Implementation:** Conducted a comprehensive literature review and proposed a conceptual hybrid cloud–edge architecture for real-time driver monitoring.
- **Methodology:** Conducted a systematic literature review of recent DMS and Edge Computing studies, comparing existing architectures, identifying research gaps, and synthesizing findings into a conceptual hybrid framework.
- **Results & Contribution:** Proposed a scalable hybrid cloud–edge architecture for Driver Monitoring Systems that theoretically reduces latency and network dependency while providing a foundation for future implementation and experimental validation.

Leadership, Academic Engagement & Community Service

University Leadership & Community Service
Albukhary International University, Alor Setar, Malaysia

- **Event Management Co-Representative**, AIU Myanmar Students Association (AMSA) (2023 – 2024). Initiate the planning, logistics, and execution of 7 major cultural events and 1 large-scale exhibition to represent the Myanmar Association.
- **Volunteer Lecturer**, Hope Project (2023 – 2024). Taught foundational educational sessions to Rohingya refugee children, actively driving UN Sustainable Development Goal 4 - Quality Education
- **Vice President**, Centre for Foundation Studies (2021 – 2022). Co-directed student council initiatives and advocated for the academic and welfare needs of the foundation student body with university administration.
- **Media Unit Member**, AMSA (2021 – 2022). Managed comprehensive audiovisual operations for university-wide events, precisely configuring and controlling audio mixers, projectors, amplifiers, and presentation broadcasts.

Academic Conferences

- **Participant:** *Symposium on Tech Transformation: AI's Role in Shaping the Future of Muslim Youth*, Universiti Teknologi MARA (UiTM), Arau, Malaysia (June 2024).

Technical Skills & Certifications

Cybersecurity & GRC: Vulnerability & Risk Management, Security Risk Assessment (SRA), DLP, Penetration Testing, Cryptography
Networking & Support: Active Directory Domain Services, Cisco Routing & Switching, DNS/DHCP/VPN, Network Hardening, VMware Server, NAT, Packet Analysis
Tools & Platforms: Linux CLI, Postman, Burp Suite, Wireshark, Microsoft 365, K2
Development: Python, Java, C, HTML, CSS, JavaScript, Flask
Certifications & Training:

- **Enterprise Networking Course** (M.S.C Education Centre, Mar 2020) – Focus: Windows Server implementation, AD DS, DNS/DHCP, VPN, VMware.
- **Hardware & Network Engineering** (M.S.C Education Centre, Nov 2019) – Focus: 320 hours hands-on telecommunications, OSI models, and A+/Network+ domains.
- **Professional Communication:** Communicative English Course (Flamingo Language Center, 2021) — Intermediate General English (Success Language Academy, 2018).
